

· A HEALTHIER TOMORROW BEGINS TODAY ·

The new Alter-G Anti-Gravity Treadmill at Davis Life Care Center helps you exercise for maximum efficiency at your comfort level. Space-age technology allows you to simply dial-in the percentage of your body weight that you can comfortably bear while exercising.

Defy gravity as you exercise at Davis Life Care Center

When you try Davis Life Care Center's unique new Alter-G Anti-Gravity Treadmill the first time you will be amazed at just how easy and comfortable exercise can be.

The Alter-G "unweights" you as it defies gravity. It easily and comfortably lifts you above the floor of the treadmill to the percent of your weight you can best tolerate in your exercise program.

This system easily adjusts to the gradual needs of rehabilitation therapy after surgery or injury — as well as the tougher regimens of precise athletic conditioning.

The Alter G's unweighting allows walking or running on 20% to 100% of body weight in precisely adjustable in one percent increments

Clinically proven to reduce joint impact pain, the Alter-G Anti-Gravity Treadmill permits exercise even with orthopedic, neurological, or other medical conditions.

The anti-gravity Alter G safely promotes cardiovascular and muscle health and:

- Prevents bone loss, and encourage bone health and mineralization
- Overcomes mobility issues from deconditioning by exercising at lower body weights
- Decreases fall risk by exercising in a protected setting
- Helps with weight control and reduction
- Normalizes walking mechanics after surgery
- Lowers impact on your joints and muscles during exercise
- Helps with muscle control and strength in a protected environment

NASA Technology

Alter-G's patented Differential Air Pressure Technology, developed in NASA laboratories, applies a comfortable and uniform lifting force to your body. The lifting device is integrated into a high-tech treadmill. Alter-G's technology offers precise body weight reduction with a comfortable support.

You have opportunity to walk or run normally while eliminating pain and protecting healing tissue. In fact, only the Alter-G allows users to exercise at reduced body weight and still maintain normal movement mechanics.

The Alter-G Anti-Gravity Treadmill adjusts to accommodate virtually any exercise or rehabilitation regimen.

Call Lori Johnson at 870.535.0010 today. Make an appointment for a free demonstration. You'll discover a new approach to conditioning and rehabilitation first hand.
